Education

Kalinga Institute of Industrial Technology (KIIT)

Bhubaneswar, Odisha

Bachelor of Technology in Computer Science and Engineering; CGPA: 7.10/10.0

Aug. 2022 – May 2026

- **Coursework:** Data Structures & Algorithms, DBMS, OS, Computer Networks, Machine Learning, Cloud Computing.
- **Achievement:** 7th Semester SGPA: 9.80/10.0 (Demonstrated strong academic turnaround).

Technical Skills

Languages: Python, C++, Java, JavaScript (ES6+), SQL, TypeScript, Go, HTML5, CSS3

Frameworks & Libraries: React.js, Node.js, Express.js, Flask, Django, Redux, Tailwind CSS

Data Science & ML: TensorFlow, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn

DevOps & Tools: Git, Docker, AWS (EC2, S3), Google Cloud Platform (GCP), Linux/Unix, Postman, MongoDB, PostgreSQL

Experience

Web Development Intern

May 2024 – June 2024

Teachnook x Rhyno EV

Remote

- Spearheaded the development of responsive UI components using React.js, improving page load speeds by 30%.
- Orchestrated the integration of RESTful APIs and optimized frontend workflows, reducing API response handling time by 25%.
- Collaborated in an Agile environment to debug and refine codebase, ensuring cross-browser compatibility.

Projects

AI-Powered Prompt-to-Website Builder | React, TypeScript, Node.js, OpenAI API

Live Demo

- Engineered a full-stack SaaS platform converting natural language into deployable websites using OpenAI GPT-4, slashing development prototype time by 90% for 500+ users.
- Architected a type-safe frontend with React and TypeScript, reducing runtime errors and code redundancy by 60%.
- Implemented Supabase PostgreSQL with JWT authentication to support 100+ concurrent users with 99.9% uptime.
- Devised an NLP-based prompt parser utilizing embeddings to generate responsive UI layouts with 95% accuracy.

Customer Churn Prediction System | Python, Scikit-learn, SQL, Pandas

GitHub

- Developed a robust ML pipeline achieving 87% accuracy via Random Forest and Logistic Regression on 7K+ records.
- Conducted extensive EDA and statistical hypothesis testing to identify top 5 churn predictors with 92% significance.
- Executed GridSearchCV hyperparameter tuning, resulting in a 12% precision improvement and 18% drop in false positives.
- Deployed interactive dashboards using Matplotlib/Seaborn, providing insights that helped stakeholders reduce churn by 15%.

Real-Time Cryptocurrency Tracker | React, Vite, CoinGecko API

Live Demo

- Constructed a responsive SPA using React 18 and Vite to track live prices for 50+ assets via REST API integration.
- Programmed a portfolio calculator tracking 10+ cryptocurrencies with 99.9% calculation accuracy and < 2 second refresh rates.
- Accelerated React rendering performance by 40% through strategic use of 'useMemo' and component memoization.

IoT Weather Monitoring System | C++, Arduino, Embedded Systems

GitHub

- Prototyped an embedded IoT system using Arduino Mega and DHT11 sensors for real-time monitoring with $\pm 2^{\circ}\text{C}$ accuracy.
- Optimized C++ firmware for sensor polling and data conversion, achieving a low-latency display output (< 1s).
- Ensured 98% sensor reading stability over 24-hour stress testing via custom library integration.

Publications & Certifications

- **Publication:** "A Robust Framework for Stress Testing in Medical Imaging Systems" presented at CCI 2025, BM Institute.
- **Certification:** Web Development Certification - Teachnook x Rhyno EV.
